

EDUCLOUD

*Provides school data for service providers,
ensures correct rights management for principals.*

Learn more.

CLOUD-BASED DATA MANAGEMENT

EduCloud enables secure and controlled data management between stakeholders in the school's digital ecosystem. The service, which is cloud-based, enables, among other things, the collection of data according to a standardized format.

With reliable authorisation and detailed settings concerning which data is visible, EduCloud complies with regulations while providing service providers with central access to information at national level.

- ✓ **Correct information for those with access and need.**
- ✓ **Simplify the information exchange between parties.**
- ✓ **Offers a single point of integration for all IST systems.**

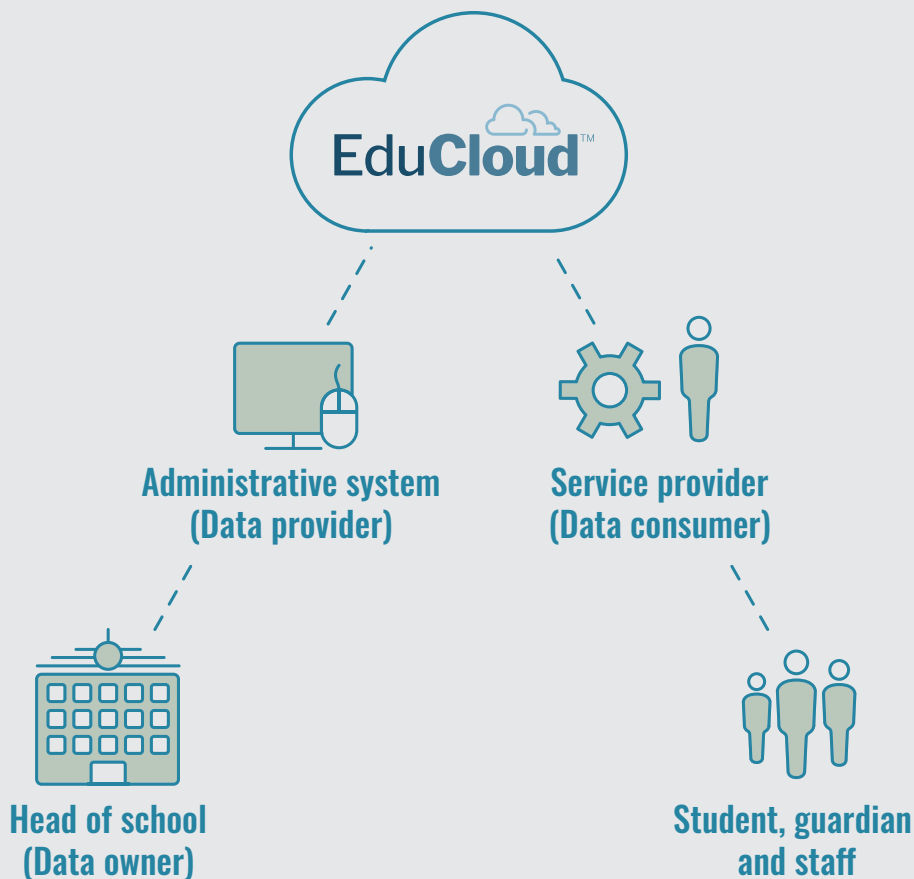

How EduCloud support different roles

Service providers

- ✓ Possibility for digital service providers to create added value in services by accessing school data.
- ✓ All dialogue between EduCloud-connected service providers and the municipality takes place immediately and without the involvement of IST.
- ✓ Get data APIs according to a standardized format.
- ✓ Automatically obtain SSO against IST systems by implementing SchoolID as a login method in your service.

Municipalities & Head of schools

- ✓ Through EduCloud, information is made available to service providers you have procured.
- ✓ As Head of school, it is possible to control which suppliers have access to which data and for how long.
- ✓ The service makes it easy to control which information becomes available, which facilitates GDPR responsibility.

EDUCLOUD is a part of our complete **IST Everyday** offer, which now is available at many schools around the country.
